

To Whom It May Concern,

Alluvial Trade, a distinguished provider of support services for smallholder farmers based in Abuja, Nigeria, has recently concluded an extensive field trial of Nano Grow Max products. Our investigation encompassed both root and foliar treatments, concentrating on enhancing soybean and rice plants' yield, overall health, and resilience under various growing conditions. As the Chief Executive Officer of Alluvial Trade, I have personally overseen, supervised, and verified these tests.

Our field trials were conducted across multiple locations throughout Nigeria, ensuring that various agricultural variables were considered. It is worth noting that all test sites had adjacent control plots alongside those treated with Nano Grow Max products. The test results can be validated by either myself or Mr. Wesley Davis, a significant shareholder in Alluvial Trade, through email or phone correspondence upon request.

Considering the exceedingly favorable outcomes, we observed during our field trials, Alluvial Trade has committed to facilitating the registration and approval process for Nano Grow Max Corp, enabling the importation of their products in substantial quantities into Nigeria. Based on our own tests and examinations conducted by accredited laboratories, we are confident that Nano Grow Max products are devoid of artificial plant growth stimulators. We wholeheartedly recommend and endorse the products Nano Grow Max Corp offers, as the remarkable test results demonstrate their efficacy.

Yours Sincerely,

Dimieari Von Kemedi
Chief Executive Officer
Alluvial Trade Ltd.
